Report Prepared by:

Division of Health Data and Statistical Research
Mary Lou Eastman, Director

FOREWORD

The 1981 annual statistical report of the Bureau of Vital Statistics uses for source documents the certificates of the births, deaths, marriages, dissolutions of marriage and fetal deaths occurring in Nebraska and to Nebraskans during 1981.

The approximately 63,000 records filed during the year are considered in the tabulations along with those of the previous years for trend tables; some 4,625,000 in all.

What are the components for a good statistical report? Number one is the statutory requirement "...shall tabulate statistics therefrom." A very important component is the awareness of the persons responsible for filing the records knowing the certificates must be accurate, complete, and filed on time. Another is the constant surveillance by the Bureau of Vital Statistics checking for the missing and yet to be filed certificates and checking item by item for any omissions or discrepancies on each record.

When the source records have all been completely checked, the statistical process begins. The uses made of this report will determine its effectiveness.

Among the people responsible for getting the records filed are the physicians, funeral directors, county judges, clerks of district courts, medical records personnel, and county attorneys, and the staffs of their offices. Thank you for the job well done in 1981.

Freda Theis, Director
Bureau of Vital Statistics

INTRODUCTION

The information presented in this report is drawn from the vital records of the State of Nebraska. The primary period covered is calendar year 1981, but selected data from previous years are also included. Data from 1981 records received after April 1, 1982 by the Bureau of Vital Statistics are not included in the tabulations in this report. However, the number of such records is minimal and their statistical effect negligible.

The congenital anomaly data presented in the report are taken from the Nebraska Birth Defects Registry, with the exception of the death data. Information for the Registry is provided by reporting personnel in approximately 100 Nebraska hospitals.

The state population figure used in the calculation of rates is 1,577,000, the 1981 estimate published by the United States Bureau of the Census. County, city and balance of county populations used are Health Department estimates. United States vital event data, presented for comparative purposes, is provisional.

Charactertistics of the population, such as its size and its age structure, can bear a great influence on vital statistics data. Only 30 of the 93 Nebraska counties, according to the 1980 Census, had populations over 10,000 along with only 12 cities. Nine counties had less than 1,000 residents. In any area with a population under 10,000, wide variations in numbers or rates of events can appear from year to year, and no single year may be truly representative of the popualtion. Counties with a high proportion of young people will show relatively higher birth rates and lower death rates than counties with greater numbers of older residents.

Starting in 1979 the Ninth Revision of the International Classification of Diseases was used in the classification of cause of death. Where data prior to 1979 is presented, when the 8th Revision of the ICD was used for classification, it is as comparable as possible to the current data.

NEBRASKA BIRTHS, DEATHS, MARRIAGES AND DIVORCES

BY NUMBER AND RATE PER 1000 ESTIMATED POPULATION

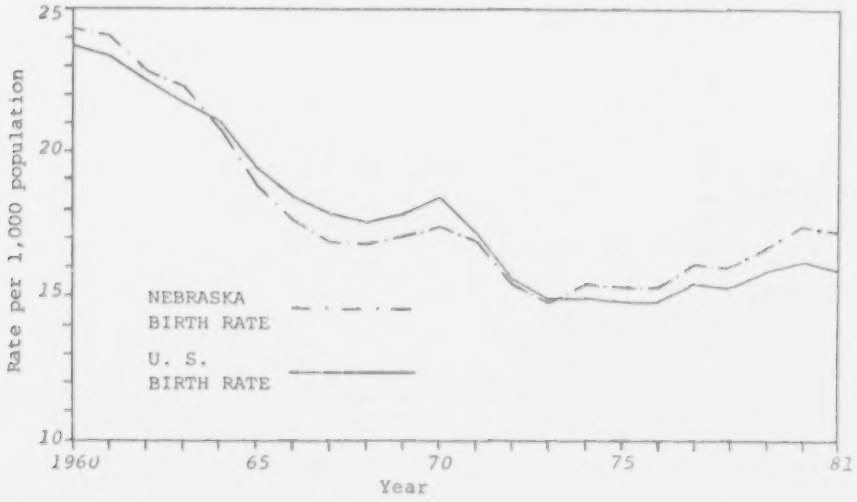
BIRTH OVERVIEW

Nebraska resident live births showed a slight decline from their 1980 level of 27,335 to 27,164 in 1981. This is only a 0.6% decrease, but may be the beginning of a long-term decline resulting from a decreasing number of women of prime child bearing ages. The rate also dropped slightly to 17.2 per 1,000 population from 17.4 in 1980. The United States rate decreased a little more than Nebraska's from 16.2 in 1980 to 15.9 in 1981. A comparison of Nebraska and United States rates for a twenty-one year period is shown in the graph below. Though Nebraska's rates have been both higher and lower than the national rates, their trends are similar.



Rates for counties within the State ranged from a high of 23.0 in Box Butte County to a low of 8.7 in Franklin County. The range is about the same as 1980, but the limits are lower. Rates for towns over 2,500 population ranged from a high in Allinace of 23.0 to a low in both David City and Falls City of 11.9.

Nearly all births in Nebraska continue to occur in hospitals and are attended by physicians. In 1981 only 0.4% (99 births) were not reported as occurring in hospitals. The percentage of births not reported as physician attended remained at 1.0% after showing some growth over the previous three years.

The educational level of both mothers and fathers is continuing to increase. The

following table shows percentages for the known cases. (A higher percentage is unknown for fathers then mothers because this is generally not shown on certificates of out-of-wedlock births, but the trend should not be significantly affected.)

	MOTHER				FATHER			
EDUCATION	1970	1975	1980	1981	1970	1975	1980	1981
≥ 12 yrs.	81.6%	83.7	86.4	86.9	84.7%	88.7	90.6	91.5
≥ 16 yrs.	9.6%	14.0	16.1	16.9	18.6%	23.3	24.3	24.7

White births continued to account for a decreasing percentage of the states' births. This probably reflects a higher proportion of young non-white families than white families. In 1981, 90.0% of births were white compared to 90.2%, 92.5% and 93.5% in 1980, 1975 and 1970 respectively. Approximately 5.1% of Nebraska's population was non-white in 1981.. Douglas County has the largest share of the non-white births, 52.3%, followed by Lancaster and Scotts Bluff with 8.6% and 7.6% respectively.

Out-of-wedlock births are still on the increase as they have been since 1973. However, the rate of ascent slackened this year. There was a 3.0% increase in number and a 3.6% increase in rate while last year the number increased 11.1% and the rate 6.8%. The number and rate of all births decreased between 1980 and 1981 by 0.6% and 1.1% respectively. The proportion of the out-of-wedlock births that were white decreased after having increased since 1978. The percentage of births which were out-of-wedlock increased for all race groups. These percentages by race follow.

	PERCENT OF OUT-OF-WEDLOCK BY RACE		PERCENT OF RACE OUT-OF-WEDLOCK	
	1981	1980	1981	1980
White	67.9	68.5	9.1	8.8
Black	22.9	22.7	57.2	56.1
Indian	4.1	4.3	45.7	40.5
Mexican	4.6	4.1	17.6	16.2
All Other	0.5	0.3	5.7	4.3

The distribution of out-of-wedlock births by age group shows that teenagers continue to account for the largest share of these births. However, the

difference between teenagers and 20-24 year olds has been narrowing and is now only three percentage points. The percent distributions by age group of mother for out-of-wedlock births and all births are given in the following tables.

OUT-OF-WEDLOCK BIRTHS

AGE	1977	1978	1979	1980	1981
Under 20	50.3	47.2	43.5	45.6	42.1
20 - 24	33.2	35.2	38.1	36.1	39.0
25 - 29	10.9	11.8	12.5	12.3	13.0
30 and over	5.6	5.8	5.9	5.9	5.8

ALL BIRTHS

AGE	1977	1978	1979	1980	1981
Under 20	13.0	12.4	11.6	12.1	11.3
20 - 24	35.9	35.1	34.9	34.8	34.5
25 - 29	34.4	34.8	35.2	34.4	34.5
30 and over	16.6	17.6	18.3	18.8	19.8

In general, the above distributions show 1980 to be an anomalous year with pre-existing trends returning in 1981. For all births, the 30 and over age group increases are accounted for by 30-34 year olds. These distributions are affected by the number of people in the age groups and this accounts for some of the change. The average age of mothers of first, second and third order births continue to increase as shown in the table which follows.

AVERAGE AGE OF MOTHER

	1970	1975	1980	1981
1st born	21.4	22.1	22.7	22.9
2nd born	24.2	24.7	25.4	25.6
3rd born	26.8	27.3	27.6	27.7

Delayed child bearing appears to be continuing but may be leveling off to some extent. The next table shows the age range of mothers where given birth order averages have occurred.

MOTHER'S AGE RANGE FOR BIRTH ORDER AVERAGES BY YEAR

	1.00 - 1.99	2.00 - 2.99	3.00 - 3.99	4.00 - 4.99	5.00+
1970	13 - 23	24 - 27	28 - 31	32 - 36	37+
1975	12 - 25	26 - 31	32 - 34	35 - 38	39+
1980	13 - 25	26 - 32	33 - 37	38 - 41	42+
1981	13 - 25	26 - 33	34 - 37	38 - 40	41+

The average number of pregnancies per woman having a live born child in 1981 remained at 2.3. The average number of live born children per women having a live born child in 1981 was 2.0, also the same as 1980.

Low birth weights occurred in 5.5% of the births, down from 5.6% in 1980. Births of ten or more pounds occurred 1.9% of the time, remaining the same as 1980. Prenatal care again began in the first trimester in 79.0% of births. The percent of mothers who had at least ten prenatal visits rose slightly to 64.8% from 64.6% in 1980.

There were 696 Nebraska resident births in 1981 on which congenital anomalies were reported to the Birth Defects Registry by June 30, 1982. This figure represents 2.5% of the 27,382 live births and fetal deaths as compared to the final 1980 figure of 2.6%.

Of the 696 cases, 18.1% weighed under 5 1/2 pounds, while 5.5% of all live births were classified as low-weight. Twenty-five cases were stillborn, representing 11.5% of the 218 fetal deaths. 551 cases had a single defect, 75 had two defects, 27 had three, 21 had four, and 22 had five or more reported anomalies.

Nebraska births in 1981 occurred at a rate of one every 19.3 minutes, or 74.4 per day. More births occurred in July (2,565) than in any other month while the month with the fewest births was February (2,056).

Jennifer remained the most popular name for girls. Matthew moved to the most popular position for boys from fourth last year.

Out-of-State: A Nebraska resident giving birth or dying in another State.
Non-Resident: A non-Nebraska resident giving birth or dying in Nebraska.

DEATH OVERVIEW

A small increase of 0.8% occurred in the number of deaths in 1981, but the crude rate remained at 9.2 per 1,000 estimated population. With the exception of 1979, when the rate dropped to 9.0, the rate has been the same since 1977. The United States rate dropped to 8.7 from 8.9 in 1980, returning to its 1979 level.

Within the state, county death rates ranged from a high of 16.7 in Sherman County to a low of 2.2 in Banner County. Rates for towns over 2,500 population ranged from a high of 23.5 in David City to a 2.2 low in LaVista. Since LaVista has a young population, it has dominated the low position for several years. This is the second year that David City has had the high position.

There was only one change in the ten leading causes of death between 1980 and 1981 and that occurred in the tenth position. Cirrhosis and Chronic Liver Disease replaced Certain Perinatal Conditions. This was caused by a reduction in the number of Certain Perinatal Condition deaths. The number of Cirrhosis and Chronic Liver Disease deaths remained exactly the same as 1980. While most of the ten leading causes increased in number, some decreased or remained the same so that as a percentage of total deaths these causes account for the same percentage as last year, 84.5%.

The leading cause of death, Heart Disease, increased substantially in number, 2.6%, after having made only modest increases in the prior three years. The rate also increased to the highest point it has been since 1974. Nationally, there was a large increase in rate last year and though what was originally reported was revised downward, a fairly large increase did occur. Now, in 1981, it appears to have dropped to a new low.

Cancer, the second most frequent cause of death, increased only slightly and the rate decreased slightly. For Bronchus and Lung, the most common site, there was a large increase, 11.3%, and nearly all of it occurred in males. The second most frequent site, the Large Intestine, continued to show a decrease but Other Digestive

Organs made more than an offsetting increase. Other Digestive Organs moved ahead of Breast as the third most common site. In spite of the drop in position, Breast showed a small increase when decreases would be more the expected action. Death rates per 100,000 estimated population for heart disease and cancer in Nebraska and the United States are shown in the following table.

	HEART DISEASE		CANCER	
YEAR	NEBRASKA	UNITED STATES	NEBRASKA	UNITED STATES
1972	389.5	363.0	182.7	166.0
1973	368.3	360.8	172.4	167.3
1974	370.4	351.6	172.3	169.4
1975	356.7	338.6	179.1	174.4
1976	352.9	338.5	169.9	174.9
1977	337.9	331.6	182.0	178.4
1978	348.4	333.0	188.2	181.9
1979	348.2	330.2	184.0	183.9
1980	349.8	335.2	188.0	186.3
1981	357.5	329.5	187.5	184.3

Both in Nebraska and the United States, Cerebrovascular Disease is the third ranking cause of death. The number and rate both made decreases as has been the pattern, but the pace of decline became more swift. Nebraska's rate of 85.1 still is above the national rate of 71.2, though their separation became smaller this year.

Accidents, the fourth leading cause of death, decreased this year by 3.7% and both the number and rate nearly went back to their 1979 level. Motor vehicle accidents primarily were responsible for the decline this year and they caused the increase last year. Other types of accidents changed somewhat, but their changes were offsetting.

Accidents are the leading cause of death for males under 40 and females under 30. At age 40, heart disease takes over the lead for males and normally remains there. However, in 1981 cancer was the leader for 50-54 year olds as heart disease deaths reduced and cancer deaths increased. This may just be an anomaly for 1981. For females, cancer is the top cause of death between 30 and 64, then heart disease takes the lead. Cancer is taking the lead sooner than previously. This is more the result of a decrease of accidental deaths than an increase in cancer deaths.

The average age at time of death is increasing again after a small downward turn last year. Overall, the average age is 71.5 years, up from 70.7 years in 1980. It also increased for both men and women. The female average passed 75 for the first time, rising to 75.4 from 74.3; the male average rose to 68.0 from 67.6. The oldest Nebraskan dying in 1981 was a women of age 107. A total of 72 persons, 19 males and 53 females, died at the age of 100 or more years.

MATERNAL, INFANT, AND FETAL DEATHS

There were two Nebraska resident maternal deaths in 1981, up one from 1980. They were attributed to a major puerperal infection and postpartum hemorrhage. The maternal death rate increased to 7.4 per 100,000 live births.

Infant deaths decreased by an outstanding 14.6%. The number is the largest decrease since the drop that occurred between 1972 and 1973, though the percentage is even larger. The Nebraska infant death rate also decreased dramatically and dropped below 10.0 for the first time. The 1981 rate was 9.9 per 1,000 live births. Nationally the rate decreased sharply also, but remains above the Nebraska rate at 11.7. A comparison of the state and national rates is shown in the table below.

YEAR	NEBRASKA NUMBER	NEBRASKA RATE	UNITED STATES RATE
1977	317	12.6	14.0
1978	326	13.0	13.6
1979	304	11.6	13.0
1980	314	11.5	12.5
1981	268	9.9	11.7

The infant death rate for whites decreased to 9.2 from 10.9, while the nonwhite rate dropped from 17.2 to 15.5. Neonatal deaths, those occurring in the first 27 days of life, also declined sharply, 19.9%, and accounted for most of the decline in infant deaths. The rate decreased from 7.5 to 6.1 per 1,000 live births.

Fetal deaths decreased by a major amount as well, 6.4%, to complete the good news for pregnancy outcomes. The number is the lowest it has been since 1977 and the rate, 8.0 per 1,000 live births, the lowest recorded.

MARRIAGE AND DIVORCE OVERVIEW

Nebraska marriages increased by 0.9% to 14,363, while the rate remained at 9.1 per 1,000 estimated population. At the national level the rate fell in 1981 to 10.6 from 10.9 in 1980.

Most marriage rate data which is presented is calculated based on the number of marriages occurring in a county per 1,000 population. This is because it is usually the best information available. However, for several years now we have received records from other states where Nebraskans were involved. Therefore, in this report we are able to present both rates calculated in the traditional manner and those calculated for the number of county residents married, regardless of where the marriage occurred, per 1,000 population. The resident data is not 100% complete because not every state exchanges data with us. However, we feel it is complete enough to be useful. In 1981, resident county marriage rates varied from a low of 2.3 in Loup County to a high of 29.8 in Thomas County. The state resident marriage rate increased slightly to 17.9 from 17.8 in 1980.

Twenty was the most frequently reported age of brides, up from 19 in 1980. For grooms, the most frequent age was 22, while last year it was 22 for all marriages and 21 for first marriages.

The percent of marriages which were the first for both bride and groom continued to decrease and the decline gained momentum, from 63.5% of all marriages in 1980 to only 61.9%. After decreasing last year, marriages which were first for neither the bride nor groom increased to 18.6% from 17.8% in 1980. The following table shows what has been happening over the last five years.

YEAR	FIRST MARRIAGE FOR BOTH PARTNERS	PERCENT OF ALL MARRIAGES
1977	8,506	63.5
1978	8,657	63.1
1979	8,991	63.9
1980	9,042	63.5
1981	8,894	61.9

Residents from several foreign countries and all states except Vermont were mar-

ried in Nebraska in 1981. Both the bride and groom were Nebraska residents in 89.0% of the marriages; neither were residents in 4.1%.

Most marriage ceremonies were religious, 80.1%, rather than civil. In marriages which were first marriages for both the bride and groom, the percent of religious ceremonies was higher at 87.8%. In both cases the percentages are dropping slightly but consistently from year to year. In 1976 the percentage of al marriages which were religious was 82.1%; for first marriages it was 90.0%. Once again June was the most popular month for marriage with 1,936 taking place. January was the least popular month with 719.

Nebraska divorces once again set record highs for both number, 6,769, and rate, 4.3 per 1,000 estimated population. The increase in number was the largest it has been since 1973. The United States rate remained at 5.3 for the third year.

The most frequent age of those divorced in 1981 was 24 for women and 29 for men. This is the same for women as last year, but a substantial change for men since the prior three years the age for men had been 25. More marriages continue to end after a duration of two years than any other length of time, with 37.3% of the divorces occurring prior to five years of marriage. Couples married from five to nine years account for 28.6% of the divorces and those married ten or more years 34.1%. There is a little movement toward the longer duration representing a slightly higher percentage. This probably reflects a movement in the population and the number of couples at risk.

Of all divorces, 67.2% of them were ending first marriages for both partners, down again slightly from 67.6% in 1980. The first marriage was ending for neither partner in 15.5% of divorces, up again from 15.2% in 1980.

Data on settlements show that in 89.2% of the divorces some type of settlement was granted, decreasing a little from 1980. Child support was granted in 81.1% of the divorces in which children under 18 were affected. Children were affected in 64.1% of the divorces up from 62.6% in 1980.

POPULATION OVERVIEW

The estimated population for Nebraska for 1981 is 1,577,000, a 0.5% increase over the revised 1980 Census figure of 1,569,825.

The table below shows natural increase (the excess of births over deaths) and net migration for Nebraska for each decade since 1930 and the beginning of the current decade.

DECADE	NATURAL INCREASE	NET MIGRATION
1930-1940	112,471	-174,600
1940-1950	139,270	-129,594
1950-1960	201,518	-115,698
1960-1970	147,200	- 73,197
1970-1980	97,420	- 12,928
1980-1981	12,584	- 5,409

Nebraska has consistently experienced out-migration over the period shown but it had been decreasing. However, either out-migration increased considerably in 1981, possibly reflecting economic conditions, or the population estimate will prove to be inaccurate.

Population projections for Nebraska are available from the State Policy Research Office. The 1981 state population estimate was made by the United States Bureau of the Census. County population estimates were made by the Health Department for the purposes of this report in lieu of those made by the Bureau of Business Research, University of Nebraska, Lincoln which were not done this year.

DEFINITIONS

BIRTHS

BIRTH ORDER - The number of live born children including the current birth.

BIRTH RATE - The number of live births per 1,000 population.

FERTILITY RATE - The number of live births per 1,000 females 15-44 years of age.

LENGTH OF PREGNANCY - The duration of gestation, in completed weeks, as calculated from the first day of the last normal menses to the date of birth.

LIVE BIRTH - The complete expulsion or extraction of a product of conception from its mother, irrespective of the period of gestation, which, after such separation breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached and is reportable.

LOW-WEIGHT BIRTH - A live born infant weighing 5½ pounds or less.

OUT-OF-WEDLOCK BIRTH RATE - The number of out-of-wedlock births per 1,000 live births.

SEX RATIO - The number of male births for each 1,000 female births.

DEATHS

DEATH RATE - The number of deaths from all causes per 1,000 population.

FETAL DEATH - Death prior to the complete expulsion or extraction of a product of conception from its mother, irrespective of the duration of pregnancy. Until the pregnancy has reached 20 weeks duration, it is not required that such a death be reported.

FETAL DEATH RATE - The number of fetal deaths per 1,000 live births.

INFANT DEATH - Death of a person under age one year.

INFANT DEATH RATE - The number of infant deaths per 1,000 live births.

MATERNAL DEATH - Death attributable to delivery or the complications of pregnancy, childbirth or the puerperium.

MATERNAL DEATH RATE - The number of maternal deaths per 100,000 live births.

NEONATAL DEATH - Death of a person under 28 days of age.

NEONATAL DEATH RATE - The number of neonatal deaths per 1,000 live births.

PERINATAL DEATHS - Fetal deaths plus neonatal deaths.

PERINATAL DEATH RATE - The number of perinatal deaths per 1,000 live births plus fetal deaths.

RESIDENCE - A person's usual place of abode. This means, in general, the place where one lives and sleeps most of the time. However, when usual residence is in a nursing home or other institution, residence is considered the place where the person lived prior to admission to the institution.

OCCURRENCE - The location in which an event takes place irrespective of the usual residence of persons involved.
